

Soltaro has made changes to the BMS Communications Hardware in it's AIO2-BTLV series of batteries. These changes have been necessitated to allow for new functionality planned for Inverter-Battery communications. As such, AIO2-BTLV batteries will no longer be compatible with all other batteries of the same model number. Distinctions have been made by serial number, explained below:

- BLC0503N – Denotes 5kWh version of newer AIO2-BTLV model. Can only be connected to other batteries with same serial number grouping (BLC0503N).
- BLC1003N- Denotes 10kWh version of newer AIO2-BTLV model. Can only be connected to other batteries with same serial number grouping (BLC1003N).
- BLC0502N – Denotes 5kWh version of previous AIO2-BTLV model. Can only be connected to other batteries with same serial number grouping (BLC0502N).
- BLC1002N- Denotes 10kWh version of previous AIO2-BTLV model. Can only be connected to other batteries with same serial number grouping (BLC1002N).

If you require any clarification on what battery you have, and how to connect it to your Soltaro Inverter, please contact us via email at service@soltaro.com for assistance.
